DEPUTY MINISTER

**ANNUAL AVERAGE DAILY TRAFFIC
ON THE KING'S HIGHWAYS AND
SECONDARY HIGHWAYS
IN ONTARIO
1963**

JUNE 1964

PREPARED UNDER THE DIRECTION OF THE PLANNING BRANCH
DEPARTMENT OF HIGHWAYS

H. W. ADCOCK
ASSISTANT DEPUTY MINISTER (ENG.)

W. BIDELL
DIRECTOR OF PLANNING

W. Q. MACNEE
TRAFFIC AND PLANNING STUDIES ENG.

FOREWORD

The traffic volumes listed in this booklet are the Annual Average Daily Traffic (AADT) figures for each of the sections of highway identified. They represent the total two-way traffic volumes occurring in 24 hours on the average day of the whole year.

Local conditions may cause variations in the volume within any one of the sections of highway listed, but on the whole these sections are considered to be adequately represented by the volumes shown.

Seasonal fluctuations of traffic occur on almost all sections of highway, usually resulting in higher traffic volumes in summer and lower traffic volumes in winter. The amount of variation varies considerably from section to section, from highway to highway and from area to area.

It is not possible to list all these variations for every section of highway and they are mentioned here only to add to the understanding of the AADT volumes given.

In a very general way, traffic volumes in Ontario are growing at the rate of about 5% per year. Obviously, local conditions will cause varying rates of growth to occur in different areas.

All volumes marked with an asterisk are estimates only.
